

Selecting a Science Project

Things to think about

CONSIDER THE FOLLOWING

1. Think of a question or problem that the answer/solution is NOT easy. In other words choose a problem that you don't already know or can easily find the answer on the Internet or by asking your Mom.
2. DO NOT choose a problem that is a report on a subject. For example: "How do Volcanoes work?"

MORE TO CONSIDER

3. Make sure the project you choose forces you to perform either an EXPERIMENT or an INVESTIGATION to solve the problem.
4. Make sure that the experiment or investigation is something you can REALISTICALLY DO and AFFORD.
5. See link for Authentic Investigations [here](#)
